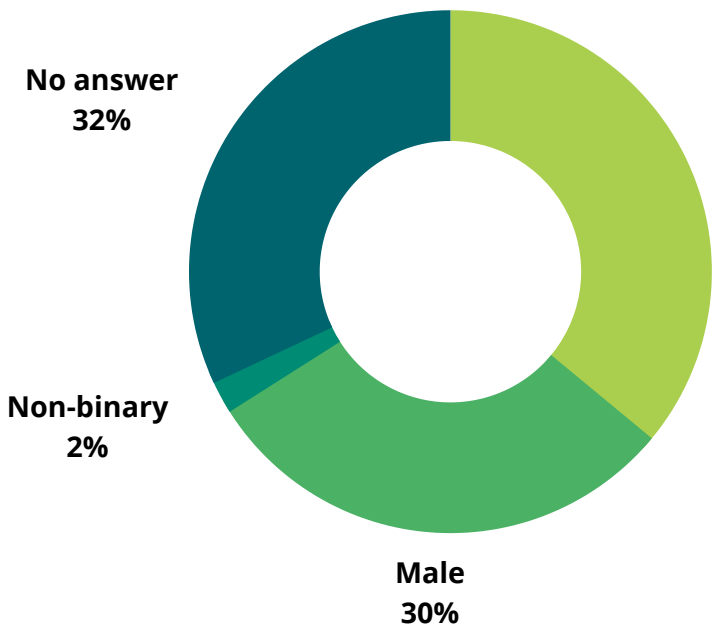
SPRINT
SUSTAINABLE PLANT PROTECTION TRANSITION

Self-assessment of gender capacities and perceptions

KEY FINDINGS
of the
Gender Survey
among all
SPRINT participants
Oct. 2021

Gender identity

1/3rd of the survey participants (n=84) refrained from disclosing any gender identity



9,5 % participants considered themselves as belonging to a marginalized group

Ways forward

Inclusion of a wider range of dimensions of inequalities as intersecting with the gender dimension (= gender⁺), e.g. race/ethnicity, wealth/class and diverse genders.

Gender Capacity

Of the survey participants:

- 68% say equal opportunities prevail in their institution
- 51% report having gender policies
- 38% support to consider gender aspects in research content; 13% not
- 13% had some gender training

Ways forward

Round of talks with WP leaders to explore:

- Aspects of gender⁺ in collaboration and contents
- Optimal modalities of gender⁺ support and/or training

Training and Support

Survey participants like to receive specific gender⁺ support or training (from 30-45%)

Specific gender⁺ trainings at consortium level or multi-WPs level

Engagement is there; a joint effort is needed for it to flourish

The survey shows that quite some SPRINT participants are fully engaged in the project's commitment to foster gender equality.

A joint effort is needed to ensure ALL actively support and collaborate to reach the commitments, and to enable to expand on the existing gender⁺ capacity.

SPRINT
Sustainable plant protection transition: a global health approach

This document is part of a project that has received funding by the European Union's Horizon 2020 research and innovation programme under GA no 862568.

SPRINT Gender Committee, February 2022

Survey lead: Margreet van der Burg and Irina Herb, in cooperation with the other committee members: Ana Frelih-Larsen, Matthew Reed, Jane Mills, Cristine Bigler and with support from Vera Felix da Graca Silva. Contact: sprint@wur.nl
